Jacki:

We (EPA and ND) inspected several wells NW of your farm today.

We found some miscellaneous issues/equipment that will have to be repaired/better maintained; however, we did not find any problems that appear to have caused air quality problems off the oil well sites or as far away as your farm. We will continue to conduct inspections at a variety of sources Thursday and Friday.

On the positive side, we noted that dust suppressant was applied to the roads in the vicinity of your farm. I hope that you find that it results in a significant improvement in the amount of dust in your area.
